PRESS RELEASE

Date: January 17, 2013

FOR IMMEDIATE RELEASE

Madison Fire & Rescue Winter Storm Safety Message

Madison Fire & Rescue would like to provide you with the following information so that each of our citizens is safe and protected as they prepare and proceed through the winter storm predicted for our area. Should you have any questions or concerns, please give us a call.

Fire Related Hazards Present During and After a Winter Storm

- Alternative heating devices used incorrectly create fire hazards.
- Damaged or downed utility lines can present a fire and life safety hazard.
- Water damaged appliances and utilities can be electrically charged.
- Frozen water pipes can burst and cause safety hazards.
- Leaking gas lines, damaged or leaking gas propane containers may explode or ignite.
- Generators are often used during power outages. Generators that are not properly used and maintained can be very hazardous.

Electrical Safety

- If your home has sustained flood or water damage, and you can safely get to the main breaker or fuse box, turn off the power.
- Assume all wires on the ground are electrically charged. This includes cable TV feeds.
- Look for and replace frayed or cracked extension and appliance cords, loose prongs, and plugs.
- Exposed outlets and wiring could present a fire and life safety hazard.
- Appliances that emit smoke or sparks should be repaired or replaced.
- Have a licensed electrician check your home for damage if you suspect any has occurred

Gas Safety

- Smell and listen for leaky gas connections. If you believe there is a gas leak, immediately leave the house and leave the door(s) open.
- Never strike a match. Any size flame can spark an explosion.
- Before turning the gas back on, have the gas system checked by a professional.

Generator Safety

- Follow the manufacturer's instructions and guidelines when using generators.
- Use a generator or other fuel-powered machines outside the home. CO fumes are odorless and can quickly overwhelm you indoors.
- Use the appropriate sized and type power cords to carry the electric load. Overloaded cords can overheat and cause fires.
- Never run cords under rugs or carpets where heat might build up or damage to a cord may go unnoticed.
- Never connect generators to another power source such as power lines. The reverse flow of electricity or "backfeed" can electrocute an unsuspecting utility worker.

Heating Safety

- Kerosene heaters may not be legal in your area and should only be used where approved by authorities.
- Do not use the kitchen oven range to heat your home. In addition to being a fire hazard, it can be a source of toxic fumes.
- Alternative heaters need their space. Keep anything combustible at least 3 feet away.
- Make sure your alternative heaters have "tip switches." These "tip switches" are designed to automatically turn off the heater in the event they tip over.
- Only use the type of fuel recommended by the manufacturer and follow suggested guidelines.
- Never refill a space heater while it is operating or still hot.
- Refuel heaters only outdoors.
- Make sure wood stoves are properly installed, and at least 3 feet away from combustible materials. Ensure they have the proper floor support and adequate ventilation.
- Use a glass or metal screen in front of your fireplace to prevent sparks from igniting nearby carpets, furniture or other combustible items.

And Remember...

- Be careful when using candles. Keep the flame away from combustible objects and out of the reach of children.
- Some smoke alarms may be dependent on your home's electrical service and could be inoperative during a power outage. Check to see if your smoke alarm uses a back-up battery and install a new battery if needed
